Set B

Enrolment No: ____________________

Name of Student: ____________________

Department/ School: ____________________

MID-TERM EXAMINATION EVEN SEMESTER 2021-22

COURSE CODE	CSET106	**MAX. DURATION**	1 HRS
COURSE TITLE	Discrete Mathematical Structures		
COURSE CREDIT	4(3L-1T-0P)	**TOTAL MARKS:**	20

GENERAL INSTRUCTIONS: -

1. Do not write anything on the question paper except **name, enrolment number** and **department/school.**
2. Carrying mobile phone, smart watch and any other non-permissible materials in the examination hall is an act of **UFM.**

Note: Attempt any 5 questions out of given 6 questions. All questions carry equal marks (4×5=20). If require any missing data; then choose suitably

---

1. Explain the use of rule of inferences. List all the rules of inferences (with correct name) with an example in English.
2. Using mathematical induction, For all n ≥ 0, we have $\sum_{p=0}^{n} r^p = \frac{r^{n+1}-1}{r-1} for (r \neq 1)$.
3. Let F(x, y) be the statement x can fool y, where the domain of discourse for both x and y is all people.

   (i) Use quantifiers to express each of the following statements:

   a) George can't fool anybody.

   b) No one can fool himself.

   c) There is someone everyone can fool.

   d) Ralph can fool two different people

   (ii) Negate each of the statements given in (i) and write the statement in English with logical expressions.

4. Show ¬(p ∨ (¬p ∧ q)) ≡ ¬p ∧ ¬q.(using laws of logic)

5. In addition to union (∪), intersection (∩), difference (-) and power set (2^A), let us add the following two operations to our dealings with sets:
   - Pairwise addition: $A \oplus B := \{a + b : a \in A, b \in B\}$ (This is also called the Minkowski addition of sets A and B.)
   - Pairwise multiplication: $A \otimes B := \{a \times b : a \in A, b \in B\}$

   For example, if $A = \{1, 2\}$ and $B = \{10, 100\}$, then

   $A \oplus B = \{11, 12, 101, 102\}$ and $A \otimes B = \{10, 20, 100, 200\}$.

   Now answer the following questions:

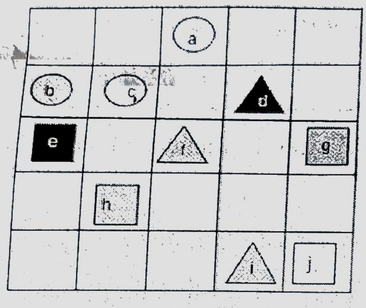
   (a) Briefly describe the following sets:

   i). $N \oplus \emptyset$ ii). $N \oplus N$ iii). $N^+ \oplus N^+$ iv). $N^+ \otimes N^+$

   where N is a set of all natural numbers that includes zero also, and N^+ is a set of all positive natural numbers.

   (b) If E is the set of all positive even numbers, what's the shortest way to write the set of all positive multiples of 4? (Use pairwise multiplication).

6.



Let Triangle(x), Circle(x), and Square(x) mean "x is a triangle," "x is a circle," and "x is a square"; let White(x), Gray(x), and Black(x) mean "x is white," "x is gray," and "x is black";

let RightOf(x, y), Above(x, y), and SameColourAs(x, y) mean "x is to the right of y," "x is above y," and "x has the same colour as y";

and use the notation x = y to denote the predicate "x is equal to y".

Let the common domain D of all variables be the set of all the objects in the Tarski world. Use formal, logical notation to write each of the following statements, and write a formal negation for each statement.

a. For all circles x, x is above h.

b. There is a triangle x such that x is black.

c. For all circles x, there is a square y such that x and y have the same colour.

d. There is a square x such that for all triangles y, x is to right of y.
